What if my child displays symptoms at

home? See NHS symptoms sheet below

Positive Test Result:

The child must complete the compulsory 10 days self-isolation from the onset of symptoms. If your child continues to have a temperature after 10 days they must remain at home. Other members of the household must self-isolate for 14 days. If a result is received at the weekend, families must inform college by 9am on Monday morning. The Local Health Protection Team will inform the college of the next steps regarding any other child within the bubble.

Symptoms and what to doCoronavirus COVID-19

- A high temperature.
- Feel hot to touch on your chest or back.
- A loss or change in what you can normally smell or taste.

• A new continuous cough.

This means **coughing** a lot for more than one hour or 3 or more coughs in a day.

If you usually have a cough then this might be worse at this time.

If you live with someone who has symptoms or tested positive

Self-isolate for 14 days

You should self-isolate for 14 days if you live with (or are in a support bubble with) someone who:

- has symptoms of coronavirus and tested positive, had an unclear result or did not have a test
- tested positive but has not had symptoms

This is because it can take 14 days for symptoms to appear.

The 14 days starts from:

- when the first person in your home or support bubble started having symptoms
- the day they were tested, if they have not had symptoms but if they get symptoms after they were tested, self-isolate for a further 14 days from when their symptoms start

You can stop self-isolating after 14 days if you do not get any symptoms.

Get a test to check if you have coronavirus if you get symptoms while you're self-isolating

If your test is negative, you should keep self-isolating for the rest of the 14 days.

If your test is positive, you should self-isolate for 10 days from when your symptoms started. This might mean you're self-isolating for longer than 14 days overall.
